

# ROLLER COATERS

FOR CERAMIC INK PRINTING

## Modern Glass Enamelling Technology

Haslesteiner GmbH are specialist manufacturers of glass decorating equipment for printing ceramic and organic colours onto glass and offer a range of full-surface roller coaters and specialist border coaters. Haselsteiner have supplied glass printing equipment for more than 30 years, ranging from the simple to full automatic systems. Flat Glass Solutions have a strong team and work closely with customers and partners.

The latest development in border (frame) roller coating is being seen as a game-changer as it entirely eliminates the labour-intensive requirements of masking the glass before printing.

VERSATILE

## FSC Full Surface Roller Coater

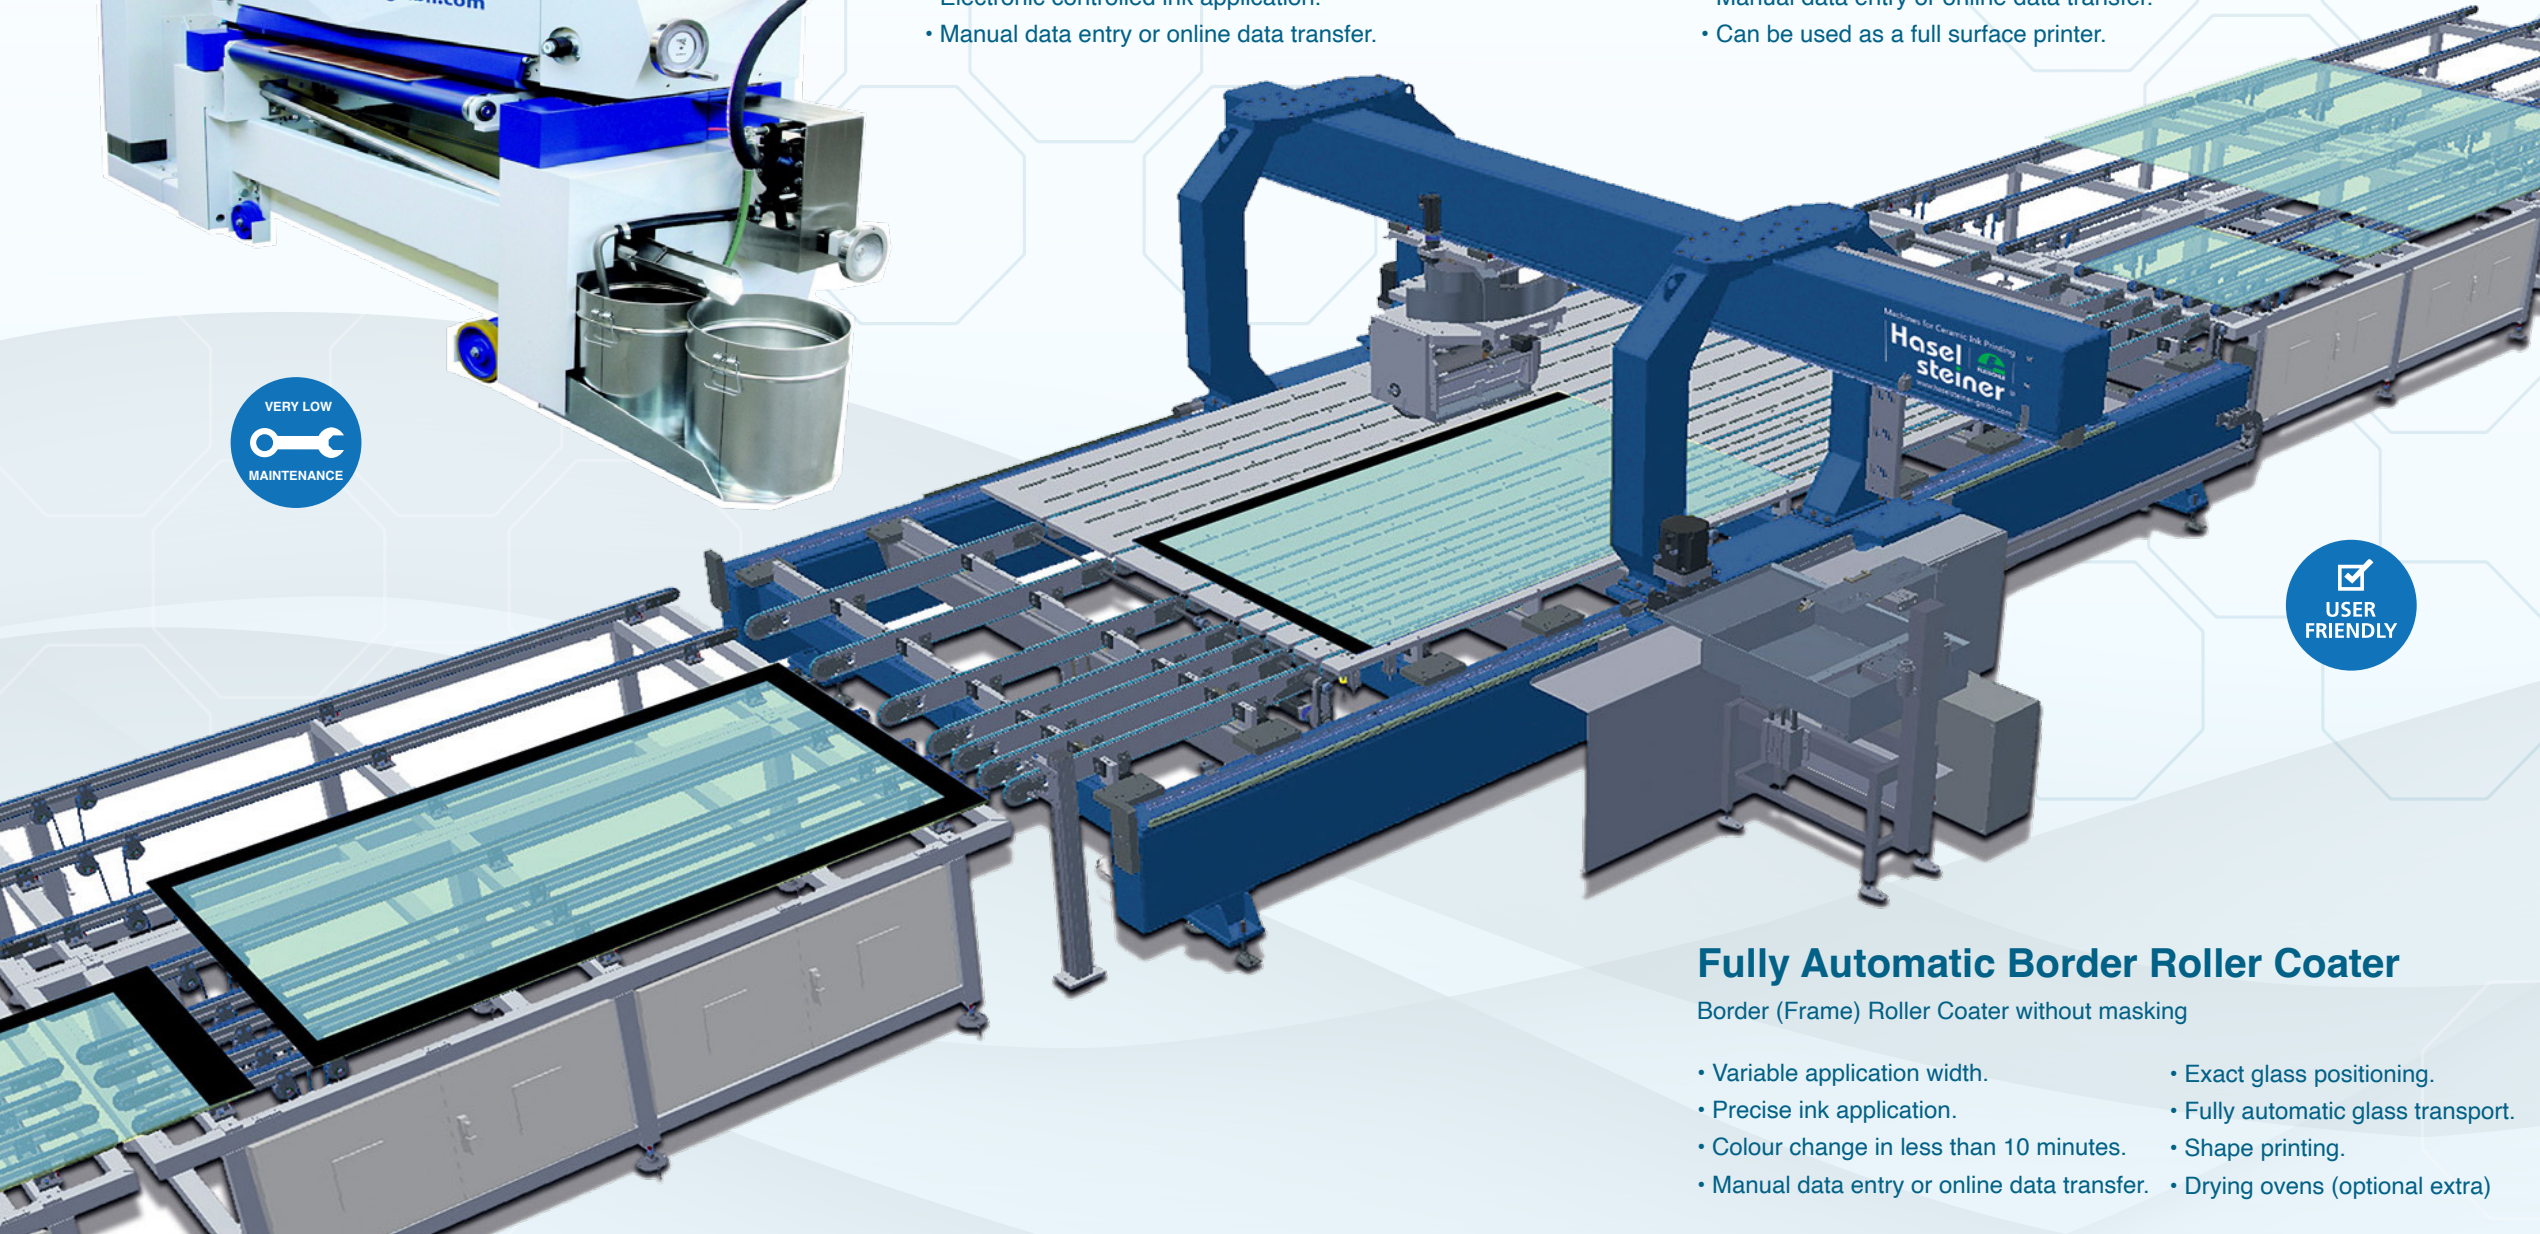

- Automatic glass transport.
- Forward or reverse printing option.
- Precise ink application.
- Optimised colour change.
- Electronic controlled ink application.
- Manual data entry or online data transfer.

## Border Roller Coater

- Manual glass positioning for all sides.
- Automatic control of frame width.
- Precise ink application in width and thickness.
- Colour change in less than 10 minutes.
- Manual data entry or online data transfer.
- Can be used as a full surface printer.

VERY LOW  
MAINTENANCE

USER  
FRIENDLY

## TECHNICAL FEATURES

## QUALITY

Quality and reliability, synonymous for all our printers, is maintained using the latest technology and in-house development programs.

## SPEED

Forward and reverse application and automatic glass indexing translates into speed and, without the need for masking and taping, the border (frame) roller coater is up to five times faster than the manual process.

## Fully Automatic Border Roller Coater

Border (Frame) Roller Coater without masking

- Variable application width.
- Precise ink application.
- Colour change in less than 10 minutes.
- Manual data entry or online data transfer.
- Exact glass positioning.
- Fully automatic glass transport.
- Shape printing.
- Drying ovens (optional extra)
